

## SPACER KITS

**Spacer Kits** are in high demand and produce optimum results for the amount of money spent. Specifically designed for an array of vehicles, these Spacer Kits add 2-2.5" of lift to the struts or coil springs. Skyjacker® offers Poly Value Kits with polyurethane spacers & red powder coated steel fabricated units like for the Honda Ridgeline. They include all the parts & hardware necessary to bolt-on this simple, but effective lift. No cutting or welding is involved and standard tools get the job done.

## ASSORTED POLYURETHANE

**Polyurethane** Skyjacker® carries a very large line of Polyurethane products to fit your vehicle's needs. The list includes Bump Stops, Bushings, Cab Mount Kits, Clearance Kits, and an array of Bushings (Spring Eye, Frame Shackle, Radius Arm, Track Bar, Caster) for various applications, makes and models. Polyurethane is a superior material that has a higher load-bearing capacity and can better resist the dynamic torque-like twisting and turning forces of suspension components as they go through their normal operation/travel movements. It is also an improved sound/vibration dampening material.

## STAINLESS STEEL BRAIDED BRAKELINES

**D.O.T. Certified Stainless Steel Braided Brake Lines** Skyjacker® has gone to 'extended lengths' to accommodate our four wheeling friends and to improve your 4x4s braking performance. All have been tried and tested in some of the most severe conditions four wheeling has to offer in virtually every corner of the world. They all passed the test and are proven in their quality of engineering, workmanship and finish. Skyjacker® brake lines conform to all federal requirements of FMVSS106, making them D.O.T. Certified and T.U.V. Approved in Germany.

## STEERING STABILIZERS

**Skyjacker® Steering Stabilizer** A steering stabilizer is a dampening shock for your steering system. It dampens out the harshness of the highway, the 'shimmy' from running the additional weight of larger tires & wheels and places control back into the driver's hands. Stabilizers also reduce the fatigue of the driver on a personal level by reducing the amount of physical strength it takes to guide those larger tires on and off the road. Changing the weak stock unit for a better performing replacement or adding dual steering stabilizers is an inexpensive but worthy investment.

## JEEP CONTROL ARMS \ LINKS

**Standard Link** Control arms are fitted with greaseable polyurethane bushings on both ends of each link end.

**Value Flex** Control arms are fitted with greaseable polyurethane bushings on one end and a NG rebuildable rod end on the other.

**Rock Ready®** Series long arm links are 80% longer than stock, fitted with NG rebuildable rod ends with "Pivot Plus" inserts for maximum rotation.

**Rock Ready®** Long Arm
